Title: GetSetGo - Web based application for scheduling Sports Tournaments.

Description: The main focus of the project is to learn how modern MVC frameworks work. Since we have some background in java, we decided to explore Spring. We intend to develop a web platform for easy scheduling of tournaments for various sports like Tennis, Soccer, etc. This will be a common platform for tournament hosts and players. There will be three user profiles:

1. Admins: Will be responsible for validating what is actually displayed on the website.
2. Tournament Hosts: They will be able to create a new tournament, select venue, etc
3. Players: Each player will have to register for their respective tournaments

Each of them will have corresponding login and functionalities.

Platform/Environment: Spring framework

Programming Languages:

Programming Language	Kavya Ravikumar	Madhumitha Soundararajan	Upendra Sabnis
JAVA	Expert	Beginner	Expert
JavaScript	Intermediate	Intermediate	Intermediate
HTML	Expert	Expert	Expert
CSS	Expert	Intermediate	Intermediate
MySQL	Intermediate	Expert	Expert

Functionality:

- Each player will have login details and they can register for the upcoming matches.
- Admins will have options to approve a team.
- Tournament hosts will be able to add and edit details regarding the league
- Provide the players with a form to fill out all the relevant details
- Schedule the matches without any conflicts in date, time and venue
